| Committed liquidity reserve for principal amount of all hard bullet bonds to be | |
| funded at least 180 days before maturity: | Yes |
| Committed liquidity reserve for principal amount of all soft bullet bonds to be | |
| funded at least 180 days before initial maturity: | n/a |

(note 1) The data reported in this PO is based on information provided by the issuer and may include certain assumptions made by Moody's. Moody's accepts no responsibility for the information provided to it and, whilst it believes the assumptions it has made are reasonable, cannot

(note i) the data reported in this PO is based on information provided by the issuer and may include certain assumptions made by Moody's Accepts to responsibility for the information provided to it and, whils it believes the assumptions it has made are reasonable, cannot guarantee that they are ownil remain accurate. Although Moody's necessary second are reasonable, cannot available on request. Credit ratings, TPI and TPI Leeway shown in this PO are as of publication data. (note 2) This assumes the Covered Bonds rating is not constrained by the TPI Also to the extent rating assumptions change following a downgrade or an upgrade of the Issuer, the necessary OC stated here may also change. This is especially significant in the case of CR assessments of A3(cr) or Baa1(cr), as the necessary OC following a 1 notch downgrade may then be substantially higher than the amount suggested here as market risks are considered more critically by Moody's at this time. In any event, the necessary OC calculated to be consistent with the current rating under Moody's expected loss model. However, the level of OC consistent with a given rating level may differ from this amount where ratings are capped under the TPI framework and, for example, where committee determines under from this amount where ratings are capped under the TPI framework and, for example, where

committee discretion is applied. (note 4) The OC consistent with the current rating is the minimum level of over-collateralisation which is necessary to support the covered bond rating at its current level on the basis of the pool as per the cut-off date. The sensitivity run is based on certain assumptions, including that the Covered Bonds rating is not constrained by the TPI. Further, this sensitivity run is a model output only and therefore a simplification as it does not take into account certain assumptions that may change as an issue is downgraded, and as a result the actual OC number consistent with the current rating may be higher than shown. The OC required may also differ from the mode output in a structure a sampling data and even in a doct not use an event, the OC amounts stated here are subject to change at any time at Moody's discretion.
